YOUR USE OF

## BENZEDRINE SULFATE TABLETS

Any potent drug should be administered under medical supervision, and Benzedrine Sulfate\* is no exception.

In medical literature, the majority of the reports of undesirable reactions attributed to Benzedrine Sulfate have been traceable to cases of indiscriminate or unsupervised use. This is equally true of the often magnified and sensational reports in the lay press.

Obviously, these unfavorable reports greatly retarded the wider clinical use of this valuable therapeutic agent. From the very beginning, Smith, Kline & French Laboratories—as a matter of business judgment, to say nothing of ethical considerations—did what it could to keep Benzedrine Sulfate solely in the hands of the medical profession.

But our own unaided efforts never met with complete success. And, understandably concerned over the possibility of self-medication, certain physicians hesitated to employ Benzedrine Sulfate therapy.

However, when the Federal Food, Drug & Cosmetic Act of June, 1938, became effective, we immediately put Benzedrine Sulfate in the category of drugs to be sold on prescription only. The Act is strictly enforced and is supplemented by similar legislation in many states. Today, as a result, the physician can prescribe Benzedrine Sulfate, secure in the knowledge that there is little likelihood of its abuse.

# BRIEF HISTORICAL NOTES

## ON

### MEAD'S CEREAL AND PABLUM

---

**H**AND in hand with pediatric progress, the introduction of Mead's Cereal in 1930 marked a new concept in the function of cereals in the child's dietary. For 150 years before that, since the days of "pap" and "panada," there had been no noteworthy improvement in the nutritive quality of cereals for infant feeding. Cereals were fed principally for their carbohydrate content.

The formula of Mead's Cereal was designed to supplement the baby's diet in minerals and vitamins, especially iron and B<sub>1</sub>. How well it has succeeded in these functions may be seen from two examples:

(1) As little as one-sixth ounce of Mead's Cereal supplies over half of the iron and more than one-fifth of the vitamin B<sub>1</sub> minimum requirements of the 3-months-old bottle-fed baby. (2) One-half ounce of Mead's Cereal furnishes all of the iron and two-thirds of the vitamin B<sub>1</sub> minimum requirements of the 6-months-old breast-fed baby.

That the medical profession has recognized the importance of this contribution is indicated by the fact that cereal is now included in the baby's diet as early as the

third or fourth month instead of at the sixth to twelfth month as was the custom only a decade or two ago.

In 1933 Mead Johnson & Company went a step further, improving the Mead's Cereal mixture by a special process of cooking, which rendered it easily tolerated by the infant and at the same time did away with the need for prolonged cereal cooking in the home. The result is Pablum, an original product which offers all of the nutritional qualities of Mead's Cereal, plus the convenience of thorough scientific cooking.

During the last ten years, these products have been used in a great deal of clinical investigation on various aspects of nutrition, which have been reported in the scientific literature.

Many physicians recognize the pioneer efforts on the part of Mead Johnson & Company by specifying Mead's Cereal and PABLUM.

---

Pablum is a palatable mixed cereal food, vitamin and mineral enriched, composed of wheatmeal (farina), oatmeal, cornmeal, wheat embryo, beef bone, brewers' yeast, alfalfa leaf, sodium chloride, and reduced iron.

WILLIAM J. KERR, 1915  
Association President 1942-43

## Report of the President

WARREN F. DRAPER, '10

*Presented at the Annual Meeting, Atlantic City, June 10, 1942*

The honor of serving as President of the Harvard Medical Alumni Association that you bestowed upon me, was received with deep appreciation, the more so perhaps because we in the Government service are in ordinary times somewhat removed from the usual rounds of work in which the men in private practice, in the hospitals, and the medical schools, are engaged. To have received this indication of your friendship and your confidence makes me very proud and grateful.

I shall minimize the "report" part of what I have to say as the reports of the Secretary and Treasurer will cover the business that has been transacted during the year. The fact that you are here tonight is evidence of your interest in the Association. There are, as you know, no membership dues. The Association is supported entirely by the voluntary contributions of its members. It is interesting to note that of the \$3,711.67 received last year about one-third was made up of one, two and three dollar amounts. In all probability many members hesitate to contribute anything at all because of inability to spare sizeable amounts. May I emphasize the fact that if more alumni would make similar small contributions the scope of our activities could be easily doubled without undue financial burden on any individual.

It is my pleasure to announce that a recipient of an Alumni Scholarship from my district is Laban W. Leiter of Kane, Pennsylvania. The amount is \$300. Two more scholarships are to be awarded pending action by the Committee on Scholarships and Fellowships.

For the past few years it has been my good fortune to visit the Harvard Medical School at intervals to interest the third and fourth year students in internships in our hospitals and the prospect of a career in the Public Health Service. In this way, I have

kept in touch with the work that the School is doing and with the thinking of the young men it is turning out. At times the response to my eloquence has made me doubt my suitability for a recruiting job of this character, but on the whole we have not done so badly. The number of medical graduates from Harvard who are coming into the Service is gradually increasing and they are giving an excellent account of themselves as is to be expected. In discussing the matter of recruitment with Dr. Elliott Cutler on one occasion, he indicated that it was highly essential that the members of the faculties of the medical schools and of the staffs of teaching hospitals encourage some of their best men to enter the Government services each year. As Government becomes more involved in the medical problems of the future it is to the best interest of all concerned that its medical officers should be men of broad vision and understanding, qualified by education and training to uphold the traditions of the profession and to join with its ablest members in working out the best solutions of the difficult problems we are sure to have to face. I am still quite mindful of the general impression that prevailed in our School in 1910 that one who entered one of the medical services of the Government was wasting any chance he might have had for success and satisfaction in the field of medicine.

Now that so many physicians from private life are entering the various Government services to remain for the duration of the war, it is inevitable that we should learn much from the experiences of each other. Many of the leaders of the American Medical Association, including Dr. Lahey, its President, are devoting intensive effort to the problems of medical service of the Governments. Surely with the knowledge gained from our efforts in a

common cause we shall have a comprehensive understanding of the medical problems of the day and be in a much better position to present a united front in formulating and putting into effect the plans that will need to be made for supplying the medical needs of the future.

On various occasions it has been my duty to meet with the 250 or more candidates who apply each year for the entrance examinations for the Public Health Service. It is customary to have a rather intimate personal discussion with each one in an effort to find out what sort of a person he is, what are his motivations in applying for the Service, and what might be his aptitude for the work we have to do. One of the things that has interested me very much is the philosophy of young physicians who have been established in practice for several years in small towns and out-of-the-way places. When these boys come before the Service Board for examination I have made it a point to ask them what it is that has led them to want to make such a drastic change in their lives. After all, they have invested time and money and a great deal of hard work and study in a medical career. They have set themselves up in practice prepared to carry out the high ideals of medical service to the people. Now after a brief experience they want to leave all this and are anxious to come into a regimented service where they will lose their independence and be subject to orders from those in higher authority for many years to come. Why, I ask them, are they doing this? What is it that has happened to them that makes them want to pull up stakes and engage in such a revolutionary change. The composite answer of all is about as follows:

"Yes, it is true that we have made a big investment in a medical career. We have had high ideals of service and we have wanted to apply our medical skill and learning and all the modern facilities for diagnosis and treatment to the people who come to us for relief. But what we find is this: We are unable to follow through in our treatment of too many of our patients. Hos-

pital care is either not available to them, or they are not able to meet the expense or they are unable to remain a sufficient length of time to insure recovery. We are able to do only a part of what we should and what we want to. It is unsatisfactory to be able to relieve only the acute condition and to know that there will probably be a relapse that we have no opportunity to prevent.

"And then there is another thing: Either our patients are unable to pay for the diagnostic procedures that are necessary for us to have a correct knowledge of the case or else the diagnostic facilities are not available. Therefore we are obliged to forego the vitally important aids to proper diagnosis and treatment. We have seen around us the results of practice of this kind. We are discouraged at the reports we hear from the well equipped medical centers on some of the patients who have received treatment from physicians who have had to practice too long without adequate facilities. Before it is too late and we have forgotten what we know and have become resigned to the practice of medicine of an inferior type we want to get away and go where we can use to advantage the things that we have learned and keep abreast of the times. We are ready and anxious to go into your government hospitals and carry out the orders that are given us if by doing so we can follow through on our cases and know that we are keeping abreast of the times."

It seems to me that there is a lesson to be learned from these young men. They are the type who are needed in the communities they are leaving. Here is a field of opportunity that has not yet been reached. When the present war is over we must try to find the right answer to this problem. A beginning has been made but I am sure that we should all agree on the wisest course to follow and go forward on a united front. May our knowledge and understanding of each other gained from close association in the days immediately ahead contribute constructively to this end.

# Red Cross-Harvard Hospital

It was announced recently by the American Headquarters for the European Theatre of Operations that the American Red Cross-Harvard University Hospital had been taken over by the Army. The hospital, located in southern England, will be the central laboratory for United States armed forces in Great Britain. At the end of the war it will be turned over to the British Ministry of Health.

Secretary of War Stimson in accepting transfer of the field hospital to the U. S. Army, wrote as follows:

"It brings to the Army the valuable services of an establishment which is especially equipped in the field of preventive medicine. Much effort and much money has gone into the founding of this Unit, and that the Army will be privileged to benefit from it during the present emergency provides a source of great satisfaction to all who are concerned with maintaining the health of our Forces. The War Department extends its appreciation to those whose generous and voluntary contributions have made the Unit possible."

Chairman Norman H. Davis, in tendering the hospital to the U. S. Army on behalf of the American Red Cross and Harvard University, wrote Secretary Stimson, as follows:

"The Unit has a staff of eighty-five physicians, nurses and technicians. It consists of an Epidemiological Field Unit, a well-equipped laboratory and a hospital of 125 beds carefully planned and built with the cooperation and support of the British Ministry of Health for the care and study of communicable disease. The three divisions of the Unit have been in successful operation for approximately a year and the Hospital is equipped to give expert aid and consultation in epidemic diseases.

The American Red Cross and Harvard University are desirous of extending maximum assistance to our armed forces in the British Isles and we have not only welcomed the opportunity but are pleased that we have been able, with the collaboration of the British Ministry of Health, to offer to the United States Army an already established and complete epidemiological unit which appears to be so admirably suited to meet the needs of our armed forces in the field of preventive medicine. It is significant that the Unit as of the time of transfer to the Army represents a total investment in excess of one

million dollars, the division of responsibility being as follows—the Hospital was provided, staffed and financed by the American Red Cross; Harvard University provided the laboratory, field units, and the medical and technical staff; the British Ministry of Health prepared the site, erected the buildings and shared in the operating cost. The investment to date by the American Red Cross was approximately \$600,000. The investment by Harvard University in addition to their invaluable contribution in the professional and technical direction of the project was more than \$150,000. The balance of the total investment has been made by the British Ministry of Health."

The field hospital consists of 22 buildings, all pre-fabricated in the United States, to specifications worked out by the American Red Cross, the director of the hospital and building experts. More than 66,000 pieces of pre-fabricated building material were shipped; the buildings were erected by British workmen, under supervision of building experts from the U. S.

Dr. John E. Gordon, Professor of Preventive Medicine and Epidemiology of Harvard University, is director of the hospital. The physician in charge is Dr. Alex J. Steigman, and the laboratory work is directed by T. F. McNair Scott, formerly Research Professor in Pediatrics at the University of Pennsylvania, and a native of England. Miss Gertrude Madley, formerly Supervisor of the Contagious Division of Herman Kiefer Hospital, Detroit, is chief nurse. Miss Madley, a native of England, saw active service in the last war as a nurse in the British Army. The staff of the hospital consists of 10 doctors, 62 nurses, 6 technicians and 8 members of the administrative staff.

The hospital developed as a result of inquiries instituted by Harvard University immediately after the fall of France as to whether or not American medical aid would be of assistance. British medical authorities expressed an urgent need for aid in the study of war-time epidemics and the American Red Cross and Harvard University joined hands in furnishing the

very complete unit consisting of hospital, fully equipped research laboratory and field unit. In the latter unit, there is complete equipment of ambulances and other mobile units prepared to go immediately to the scene of an epidemic disease, to make research on the spot. Field activities covered a wide variety of infectious diseases in many parts of England, Wales, Scotland and Ulster. A field unit dealt with a paratyphoid outbreak last year in Bristol, and a staff recently was assigned to Scotland in connection with an outbreak of smallpox. The laboratory played a large part in the work of the field hospital, being the center of the activities for the whole unit, aided in field studies and made valuable contribution to the work of the hospital. In the hospital proper, patients from all walks of life were successfully treated. British soldiers formed a large proportion of the patients, and among civilians, children from war nurseries were in the majority. In recent weeks, patients from the U. S. Army represented the dominant interest.

The first field group landed in England in August, 1940, but the hospital did not begin operations until 1941, due to the fact that all building materials and equipment had to be shipped to England. The field staff of the hospital had laid important groundwork however, beginning in January, 1941, through working with the British Ministry of Health in the control and study of epidemics. The American staff used the laboratory facilities of their British colleagues until the Red Cross-Harvard laboratory was opened in June, 1941. The hospital admitted its first patients in September, 1941.

#### ELLIOTT C. CUTLER

Elliott C. Cutler, '13, Moseley Professor of Surgery at the Medical School and Surgeon-in-chief of the Peter Bent Brigham Hospital, has been called to active service. With the rank of Colonel, M. C., U. S. A., he is to serve as Chief Surgical Consultant of the American Expeditionary Forces in the Atlantic. He was one of the leaders in Base Hospital No. 5 (the Harvard field hospital) in the last war, and has been a Lieutenant Colonel in the Army Medical Reserve Corps since 1924. He was also the organizer and chief of the present Base Hospital No. 5 unit until it was ordered overseas last March.

In addition to his many distinctions in the field of medicine, Dr. Cutler has been an Overseer of the College and President of The Harvard Alumni Association. His eldest son, Elliott, Jr., graduated from West Point in May, fifth in his class. He is now a Second Lieutenant in the infantry. A second son, Thomas Pollard, attended Harvard College, 1940-41, and this June completed his second year at Annapolis, where he stroked the Plebe crew.

#### ANNUAL MEETING

The next Annual Meeting of the Alumni Association which was to have been held in San Francisco next June will probably take place at the Medical School because of the omission of the Annual Session of the American Medical Association. The Council has discussed the possibility of holding all-day clinics and meetings in various hospitals and at the School followed in the evening by a dinner. The Secretary would appreciate having alumni express their wishes in this matter so that he can transmit them to the committee in charge.

# Military News

As this Bulletin goes to press our files show 440 graduates in active service. We realize that this list is far from complete and probably not accurate and would appreciate any further information sent to us. News should be addressed to: Harvard Medical Alumni Bulletin, 25 Shattuck St., Boston.

## FACULTY

Individual members of the staff have been called to important and interesting military posts. A few of them are reported herewith.

James C. White joined the Naval Reserve in February, 1939, and was commissioned a Lieutenant Commander. He was assigned to the U. S. Naval Hospital in Chelsea as mobilization billet, and began working there as a volunteer in March 1941. White was assigned to active duty in July 1941, and went to England to observe British war procedures in neurosurgery. Upon his return he was again placed on inactive service. After the incident of December 7 he asked to be returned to active duty and since that time has been assigned to the U. S. Naval Hospital in Chelsea, in charge of neurosurgery. This permits him, however, to continue his investigative work and teaching at Harvard and at the Massachusetts General Hospital. During the spring of 1942 White was sent to Canada and later to Norfolk, Va., to observe cases of exposure and determine routine treatment for "immersion foot." His report is to be published in a forthcoming issue of *The Naval Medical Bulletin*.

At the request of the Surgeon General, Walter Bauer, Associate Professor of Medicine, has gone into service as Medical Consultant and Coördinator of Medical Activities for the 8th Service Command. He has been commissioned Lieutenant Colonel, M.C., to act as supervisor of medical service in the hospitals assigned to that command. He left early in August to

report at the Army Medical Center in Washington and observe treatment at the Walter Reed Hospital. He also visited the Lawson General Hospital and the laboratory of the Fourth Service Command in Atlanta and the LaGarde Hospital in New Orleans. His headquarters are San Antonio, Texas, and the area under his supervision includes that state, Arkansas, Oklahoma, Louisiana, and New Mexico.

Howard C. Coggeshall, Instructor in Medicine, is now a member of the Station Hospital Staff at Camp Carson, Colorado Springs. This is an 1800-bed hospital which has been opened only a few weeks. Dr. Coggeshall, with the rank of Captain, M.C., U.S.A., is Chief of the Arthritic Service in an activating camp of some 30,000 men sent in from induction boards.

Merrill Moore is a Major in the Medical Corps, assigned to active duty at Denver, Colo. He is at present Senior Instructor in the School for Medical Department Technicians, No. 1. These are the so-called "soldiers in white" who are trained as enlisted men to assist in caring for the sick and wounded and as medical technicians.

Henry A. Christian, Emeritus Professor of the Theory and Practice of Physic has been recalled to active duty in the Medical School by the President and Fellows of Harvard to "give clinical instruction, without salary." Also he has gone on service at the Beth Israel Hospital as Visiting Physician to release younger men for service with the armed forces.

## ASSOCIATION OFFICERS

William J. Kerr, *President*  
 Reginald Fitz, *Vice-president*  
 Clark W. Heath, *Secretary*  
 Marshall K. Bartlett, *Treasurer*

## ANNUAL MEETING

The Annual Meeting of the Association and a dinner were held on June 10, 1942 in Atlantic City during the Annual Session of the American Medical Association. 84 alumni were present. General Warren F. Draper presided.

A short business meeting was held. William J. Kerr, '15, of San Francisco, California, was unanimously elected President of the Association for 1942-1943. The following candidate was unanimously elected Councillors for 1942-1945: John Homans, '03, of Boston, Robert M. Lord, '18, of Providence and Gordon A. Donaldson, '35, of Boston.

It was voted to change Article V, Section 2 of the Constitution to read as printed on Page 88 of the BULLETIN, June, 1942, Vol. 16, No. 4 which provides for the election of Councillors by printed ballot sent to all alumni.

General Draper read the President's Report which is reproduced in this number of the BULLETIN. Edward L. Bortz of Philadelphia gave a very interesting talk based upon his experiences as a member of a Committee of the Overseers which recently reviewed the activities of the Medical School. Dr. Walter B. Cannon described

the development and course of a life of study in physiological mechanisms. In introducing him, President Draper noted that this was Dr. Cannon's retirement year and gave him a tribute for his successes in many fields. Dr. Frank H. Lahey spoke of the needs of the army for physicians and the seriousness of the emergency to physicians throughout the country. Dr. Elliott Joslin made a few remarks at the close of the meeting.

## TREASURER'S REPORT

The response of the alumni to the appeal for contributions to carry on the work of the Association has been most gratifying. This year we have received money from 840 men. This is only 89 less than we received in the same period last year. As a great many of our graduates are on active duty and no appeals were sent to foreign countries this is an excellent response. Last year we received \$3,654.67 and this year \$3,399.25 or \$255.32 less than in the year 1940-1941.

If each alumnus contributed \$1 a year we would receive about \$5,000: \$2.00 a year: \$10,000. The BULLETIN is published and supported by the Association without subsidy from the University. Scholarships, aid to students during illness, the running of our office, and other activities are supported entirely by the response to our appeals. The Association can become increasingly important and effective in helping the Medical School if each alumnus bears his share in supporting it.

June 1, 1941-June 1, 1942

### MEDICAL SCHOOL NOTES

So much has happened in the Medical School during the past summer that the BULLETIN can only touch upon the many important changes which have taken place. Matters are decided over-night which in peace-time might require months of debate. Important people come and go with no more than perfunctory greetings and farewells, which ordinarily would merit some columns or pages here. We are behind in alumni notes, of which enough have accumulated to fill a whole BULLETIN. One hundred and seventy-five men have withdrawn from the Faculty of Medicine to take posts in the war effort. So many alumni have left that we scarcely know if this number of the BULLETIN will be read, and we have an anxious thought or two about the next annual appeal for contributions.

But alumni can be assured that the Medical School is proceeding in an effective way with its teaching of students and its other manifold functions as part of the university. The classes are of the usual size: about 125. The continuous program is running smoothly and the students are kept—if not running—extremely busy. Their health seems to have been unaffected by the accelerated program and precautions are being taken in this matter. The next class is to be admitted March 8, 1943. This is the Class of 1947, but instead of graduating in June 1947 it will be given diplomas in March 1946, unless our enemies cry uncle before that time.

\* \* \*

One of the functions of the BULLETIN is to record the most noteworthy events for future historians. The following event occurred in a southern camp where members of one of our hospital units were receiving their indoctrination course. It was a hot day on the parade grounds. Everyone was dressed his best and the rules of military courtesy were at the moment particularly formal. Major X, who has been well known for his irrepressible tongue, was in

a group walking across the grounds. He saw approaching him a superior officer, let us say Colonel Y, whom he recognized as a former colleague in his Boston hospital. Colonel Y had been in the army long enough to acquire many of the luxuries of military adornment. He was at present gorgeously attired and carried on his head a white tropical helmet. As he passed stiffly by the group there was an exchange of salutes and Major X was heard to whisper distinctly: "Where's your broom?" ,

\* \* \*

The increasing load of work handled in the Dean's Office has been relieved by an unusual appointment of an excellent man. Joseph Stoner Lichty, '33, has been made Assistant Dean of the Faculty of Medicine and Assistant Professor of Medical Administration. Dr. Lichty obtained his post-graduate medical training at Mercy hospital in Pittsburgh, University Hospital in Cleveland and Barnes Hospital in St. Louis, Missouri. In 1938 he obtained the degree of M.B.A. at the Harvard Business School and between 1938 and 1940 served as Assistant Dean to that school. He came to the Medical School from the Personnel Department of the Cleveland Trust Company.

\* \* \*

Among the many promotions and new appointments among the faculty will be mentioned the following:

George Van Siclen Smith, '26, has been appointed the W. H. Baker Professor of Gynecology. He has been doing steadfast and accomplished work both in clinical surgery and hormone research at the Free Hospital for Women.

Francis R. Dieuaide has been made Clinical Professor of Medicine. Dr. Dieuaide graduated from The Johns Hopkins Hospital in 1920. He came to us from the Peiping Union Medical College where he had been Professor of Medicine. His research has been in the fields of heart disease, electrocardiography and metabolism in disease. He will continue his work

at the Massachusetts General Hospital.

Joe V. Meigs, '19, has been appointed Clinical Professor of Gynecology and Allan M. Butler Associate Professor of Pediatrics, both in connection with departments in their respective fields at the Massachusetts General Hospital.

Franklin Faust Snyder has been appointed Associate Professor of Anatomy and Obstetrics. Dr. Snyder graduated from the Johns Hopkins Medical School in 1932 and served there as Associate Professor of Obstetrics since 1928.

Frederick John Stare has been appointed Assistant Professor of Nutrition. This is a new title, bridging a gap between clinical and laboratory branches of nutritional science. Dr. Stare will work both in the laboratory and the field and in connection with the Medical School and the School of Public Health. He is a graduate of the University of Wisconsin and the University of Chicago. He received the degree M.S. in 1932 and Ph.D. in 1934 from the University of Wisconsin and received his M.D. from the University of Chicago in 1940.

Another unusual title, indicating the concern of the School for representation in the newly opened fields of medical science, has been conferred upon Henry Peter Treffers who has been made Assistant Professor of Comparative Pathology and Biological Chemistry. Dr. Treffers is an immunologist. He received his Ph.D. in Chemistry from Columbia in 1937.

John Howard Mueller succeeds the late Hans Zinsser as Professor of Bacteriology and Immunology. Dr. Mueller came to Harvard with Dr. Zinsser in 1923. As Associate Professor he has been extremely successful in managing the affairs of the Department since the death of his chief. He has been recently engaged particularly in the study of immunity, epidemiology and filterable viruses.

\* \* \*

To assist in filling depleted ranks of teachers in the Medical School, five emeri-

tus professors have been called back into active service. They are: David Cheever, Henry A. Christian, John Homans, Franklin S. Newell and William C. Quimby. Dr. Cheever took over the position of Surgeon-in-Chief at the Brigham Hospital on July 15, in Dr. Elliott Cutler's absence.

\* \* \*

A special course in tropical medicine is being given this year in twelve afternoon sessions to the Fourth Year Class. This is a practical course in the diagnosis and treatment of diseases so important to parts of the American Army stationed in tropical and sub-tropical countries.

\* \* \*

A new office, known as "Medical School Research Laboratories," has been organized in the Medical School under Mr. U. Haskell Crocker. The purpose of this office is to coordinate and centralize the business details of the various research projects in progress in the Medical School, operating under contract with the Office of Scientific Research and Development.

\* \* \*

Various methods have arisen of helping students who are pressed financially because of inability to earn money during the accelerated program. Vanderbilt Hall has been able to reduce rental prices to some extent because of running throughout the year. The Kellogg fund of \$10,000 for scholarships will be of considerable help. The Charles H. Hood Dairy Foundation has granted a sum of money for scholarships. The loan fund has been considerably increased from various sources: the federal government has set up funds for loans under special circumstances and the Francis L. Proctor Aid Fund of \$10,000 is for use as loans and gifts to students. The Alumni Association has donated \$1,000 this year for three scholarships. These scholarships were awarded to three first-year students: Charles F. Morrell, of Stoneham, Mass., \$400.00; Edmund John Harris, of Waltham, Mass., \$300.00; Laban Wingert Leiter, of Kane, Pa., \$300.00.

## NECROLOGY

1867-1868

BERTRAND FRANCIS DUNN died April 11, 1942 at Portland, Me.

1881

GEORGE HENRY W. WHITESIDE died April 20, 1942 at Omaha, Nebraska.

1887

WILLIAM JAMES COCHRAN died August 29, 1942 at Natick, Mass.

1889

JOHN MILLER TURPIN FINNEY died May 30, 1942 at Baltimore, Md.

1890

EDWARD LEWIS BURNS died January 29, 1940 at Newark, N. J.

1894

ALMON GARDNER MORSE died July 27, 1942 at Hingham, Mass.

1895-1899

HOWARD KENNETH GLIDDEN died May 31, 1942 at Swampscott, Mass.

1897-1898

CURTIS NYE SMITH died August 20, 1942 at Newton, Mass.

1898

EDWIN BANNISTER FORBES died April 15, 1941 at Detroit, Mich.

1899

GEORGE ALBERT McEVOY died August 18, 1942 at Chestnut Hill, Mass.

1904

EDWARD ALBERT CUNNINGHAM died June 14, 1942 at Belmont, Mass.

HENRY MARTYN FIELD died May 21, 1942 at Norwood, Mass.

1906

LT. COLONEL CARL HAMLIN WITHERELL died November 19, 1940 at Fort Brady, Michigan.

1907

WILLIAM JANOWSKY BERNIS died March 3, 1942 at Buffalo, N. Y.

SHERMAN PERRY died April 20, 1942 at Boston, Mass.

1908

JOHN FRANCIS MAGUIRE died December 27, 1941 at Rutland, Mass.

HENRY KOVAL MARKS died September 1, 1942 at Lyon, France.

1910

CONSTANTINE POPOFF died May 30, 1942 at Haverhill, Mass.

1912

WALTER MAURICE LACEY died April 6, 1942 at Cheyenne, Wyo.

1932

LIBERTAD GAETAN died May 5, 1942 at San Juan, Puerto Rico.

## ALUMNI NOTES

1895

On June 8 the American Medical Association conferred one of its three distinguished service awards on Elliott P. Joslin, Clinical Professor of Medicine, Emeritus, at the Medical School.

1896

Harris P. Mosher, Professor of Laryngology, Emeritus, received the honorary degree of D.Sc. from Jefferson Medical College, Philadelphia, on June 5.

1900

On May 8, two members of the Class of 1896 (Harvard) were elected honorary members of the Academy of Sciences of the Union of Soviet Socialist Republics: Professor Gilbert N. Lewis, A.M. '98, Ph.D. '99, for many years head of the Department of Chemistry at the University of California, and Walter B. Cannon, A.M. '97, M.D. '00, S.D. Hon. '37, George Higginson Professor of Physiology at the Harvard Medical School. They are two of five American and British scientists thus honored—the first to be chosen as honorary members since the Russian Revolution. Cannon, who retired from the Harvard Faculty this year, has been elected foreign secretary of the National Academy of Sciences.

Harry G. Wyer is teaching military medicine at the University of Vermont.

1901

The annual dinner of the local members of the Class of 1901 was held at the Harvard Club, Boston, on May 22, 1942. Twenty-two members were present. The Class President, Cheever, presided and acted as toast-master. A play was read by Boos and several others gave brief talks.

George Dow Scott has a new book just off the press—Heredity, Food, and Environment in the Nutrition of Infants and Children.

Samuel G. Underhill writes from Santa Barbara: "After staying at my home in Touraine, France, aiding all I could, during the war, the exodus of refugees, the debacle, and the return if possible to their homes, I came to the United States by Clipper in July, 1941. I was caught in Panama, December 7 and reached here 'blacked-out' two weeks late. I may remain here indefinitely."

1904

Frederick C. Kidner is a member of the orthopaedic division of the National Research Council.
